Practice Set-2: Input and Output Statements

1. Write an application program in 'C' language to reserve three memory locations named **empno**, **salary** and **itax** having values **8801**, **12000.00**, and **347.82** respectively. Also display the same on the console in the following sequence and format: -

EmpNo	::	**8801**
Salary in rupees	::	**12000.00**
Income tax in rupees	::	**347.82**

2. Write an application program in 'C' language **to accept** values for **employee number**, **salary**, and **income tax to be deducted** from the standard input device. Also display the same on the console in the following sequence and format: -

Employee No	::	<<?>>
Salary in rupees	::	<<?>>
Income tax to be deducted	::	<<?>>

3. Write an application program in 'C' language **to accept** values for **product number**, **unit price**, and **quantity** taken from the standard output device. Also display the same on the console in the following sequence and format: -

Product No	::	<<?>>
Unit price in rupees	::	<<?>>
Quantity taken in pieces	::	<<?>>

4. Write an application program in 'C' language **to accept** values for **registration number** of a student and the **marks obtained in C, C++, JAVA,** and **VB** from console. Also display the same on the console in the following sequence and format: -

Student Marks Detail
